## **RAILPOWER SIGNS ASSEMBLY AND SUPPLY AGREEMENTS WITH LEADING EAST COAST US LOCOMOTIVE SUPPLIER**

**VANCOUVER, British Columbia, July 19, 2005** – RailPower Technologies Corp. (TSX: P) announced today that it is expanding its locomotive manufacturing capability with signed assembly and supply agreements with Super Steel Products Corp., of Milwaukee, Wisconsin, and Super Steel Schenectady, Inc., of Glenville, New York.

President and CEO, Jim Maier, said “We felt it appropriate to bring on line additional manufacturing capacity for our locomotive production and we are pleased to announce this agreement with Super Steel which has a strong reputation in manufacturing locomotives.

“RailPower locomotives will be assembled by Super Steel in their Schenectady facility in New York State. This is a first class facility which will give us significant capacity for the large, east coast markets.”

Super Steel Products Corp., headquartered in Milwaukee, Wisconsin, is a leader in providing fabrication and complete assembly solutions to its customers in several diverse industries. Super Steel’s expertise and capability in the rail industry provides the complete manufacturing solution we seek. Their Schenectady facility has the required size, equipment, and highly experienced locomotive design and fabricating workforce.

RailPower’s hybrid locomotives, the Green Goat® Series, reduce diesel fuel use and greenhouse gas emissions by 40-70% when compared to conventional yard locomotives. They also cut smog-precursor oxides of nitrogen (NOx) and particulates 80-90%, and are very quiet.
